

Ceiling foliage tiles (59x59cm)

Start by removing the existing tiles from your suspended ceiling.

Place the tiles one by one into the designated spaces, taking care not to damage their polystyrene base.

If you have chosen multiple types of tiles, make sure to alternate them for a beautiful look.

Pull out any plants caught between the tiles and the grid rails of the suspended ceiling.

Subsequently, style the volumes of the plants by pulling them gently downward to create a nice drape.

Your green ceiling installation is finished!
