

Tree

Unwrap the tree from its protective blanket.

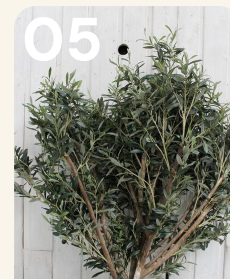

You will find the screws on the trunk.

You will find holes with reference labels on the trunk.

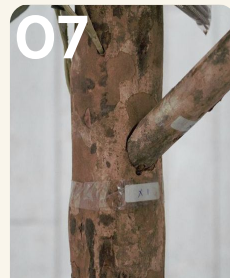

Each hole corresponds to a branch with the exact same reference label.

Remove the wrapping, then separate the branches from one another.

Remove the wrapping, then separate the branches from one another.

You can now insert the branches into the holes.

Place all the branches into their respective slots.

You will now be able to screw in the branches.

Pre-defined holes are ready on the trunk.

Tree

Insert the screws into the holes and tighten them.

You can now conceal them using this product.

You can now conceal them using this product.

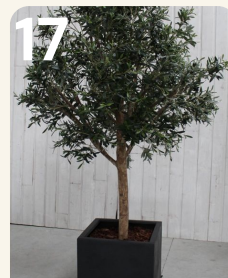

Apply onto the screws...

...and around the branches.

Unfold the branches and position them as you wish.

The installation of your tree is complete!
